**RECOMMENDATION LETTER FOR ANDREAS AGUSTINUS WONG**

I am writing this letter to give my highest recommendation for Andreas Agustinus. Andreas has served as a Mobile Application Software Engineer at Hata Technologies for the past three years. As the Frontend Engineering Manager, I have had the privilege of working closely with him, and I can confidently say he is one of the most reliable and impactful mobile engineers I have managed.

During his tenure at Hata Technologies, Andreas played a pivotal role in our major crypto exchange app revamp. He took full ownership of the "Earn" product stream, leading the mobile execution for our staking features—a complex domain requiring high precision and seamless user flows. In addition, Andreas successfully architected and implemented core platform features, including Passkey verification, robust Feature Flags systems, and our Referral Programs. His deep expertise in Flutter allowed us to maintain a clean codebase while scaling cross-platform performance.

What truly sets Andreas apart is his delivery speed and composure under pressure. Crypto products demand tight deadlines, zero downtime, and strict security considerations. Andreas consistently thrives in high-pressure environments, delivering feature-complete work rapidly and reliably on time. Furthermore, his ability to communicate clearly and proactively with backend engineering teams ensured smooth API integrations, minimized friction across disciplines, and kept development cycles moving fast.

Andreas is a high-performing engineer, a natural collaborator, and a strong asset to any technical team. While we will miss his contributions at Hata Technologies, I fully support his next steps and am confident he will make an immediate impact in his next role.

Please feel free to contact me directly if you require any further information regarding his performance and character.
